Invisibile all'occhio

Invisible to the Eye

Alberto Diaspro, Professore Ordinario, Università di Genova e Direttore di Ricerca presso l'Istituto Italiano di Tecnologia

ABSTRACT

When did you realize that there is something that your eyes could not see? Can you distinguish between sars-cov-2 and a "common" flu virus? We will change the game of the relationship between a piece of glass and the rainbow, from Galilei's eyeglass to Toraldo di Francia's "super view", when exploring the living at the nanoscale. We will try to understand "many interesting things about the strange phenomena that occur in complex situations and above all that could have countless technological applications.", just to recall Mr. Feynman, father of nanotechnologies.
